

Virtual Classroom Medium

- In a traditional classroom, a professor of mine once said:
 - A classroom is a **medium** through which information is transferred from the professor's notes to the student's notebooks, without passing through the brain of either.
- So, what is a virtual classroom?
- By induction, I would define a virtual classroom as follows:
 - A virtual classroom is a **medium** through which information is transferred from the professor's computer to the student's computer, without passing through the brain or notes of either.
 - Thus, it is essentially an additional application layer on the OSI architecture that facilitates this automated information transfer.

1999 M. T. Fatehi

From time-to-time, we would use such discussions and comments that are totally unrelated to the technical material the we are covering. This would a add feeling of reality and personal communication to this virtual class room.
